

1. Create a program to convert student marks from String format to Integer and calculate total marks.

Code:

```
public class StudentMarks {  
    public static void main(String[] args) {  
  
        // Student marks stored as Strings  
        String mark1 = "85";  
        String mark2 = "90";  
        String mark3 = "78";  
  
        // Convert String to Integer using Integer.parseInt()  
        int m1 = Integer.parseInt(mark1);  
        int m2 = Integer.parseInt(mark2);  
        int m3 = Integer.parseInt(mark3);  
  
        // Calculate total marks  
        int total = m1 + m2 + m3;  
  
        // Display the marks  
        System.out.println("Marks in Subject 1: " + m1);  
        System.out.println("Marks in Subject 2: " + m2);  
        System.out.println("Marks in Subject 3: " + m3);  
  
        // Display the total marks  
        System.out.println("Total Marks: " + total);  
    }  
}
```

Output:

```
Marks in Subject 1: 85  
Marks in Subject 2: 90  
Marks in Subject 3: 78  
Total Marks: 253
```

2. Develop an Employee Payroll System that accepts employee IDs, basic salary, and bonus amounts from the user. Convert the entered values into wrapper objects and perform validation operations to ensure valid salary values before calculating the net salary.

Code:

```
import java.util.Scanner;

public class EmployeePayroll {
    public static void main(String[] args) {

        // Create Scanner object for user input
        Scanner sc = new Scanner(System.in);

        // Accept Employee ID
        System.out.print("Enter Employee ID: ");
        String empId = sc.nextLine();

        // Accept Basic Salary as String
        System.out.print("Enter Basic Salary: ");
        String basicSalary = sc.nextLine();

        // Accept Bonus as String
        System.out.print("Enter Bonus Amount: ");
        String bonus = sc.nextLine();

        // Convert String values into Wrapper Objects
        Integer salary = Integer.valueOf(basicSalary);
        Integer bonusAmount = Integer.valueOf(bonus);

        // Validate salary values
        if (salary < 0 || bonusAmount < 0) {
            System.out.println("Invalid Salary or Bonus Amount!");
        } else {
            // Calculate Net Salary
            Integer netSalary = salary + bonusAmount;

            // Display details
            System.out.println("\nEmployee ID : " + empId);
            System.out.println("Basic Salary: " + salary);
            System.out.println("Bonus Amount: " + bonusAmount);
            System.out.println("Net Salary : " + netSalary);
        }

        // Close Scanner
        sc.close();
    }
}
```

Output:

Enter Employee ID: E101
Enter Basic Salary: 50000
Enter Bonus Amount: 5000

Employee ID : E101
Basic Salary: 50000
Bonus Amount: 5000
Net Salary : 55000

Enter Employee ID: E102
Enter Basic Salary: -20000
Enter Bonus Amount: 3000

Invalid Salary or Bonus Amount!
