

Assignment 13

1. Create a program to write and read employee details from a file.

Code:

```
import java.io.*;
```

```
public class EmployeeFileHandling {
    public static void main(String[] args) {
        String fileName = "employee.txt";

        // Writing employee details to file
        try {
            BufferedWriter writer = new BufferedWriter(new FileWriter(fileName));

            writer.write("Employee ID: 101");
            writer.newLine();
            writer.write("Name: Rahul");
            writer.newLine();
            writer.write("Department: IT");
            writer.newLine();
            writer.write("Salary: 50000");
            writer.newLine();

            writer.close();
            System.out.println("Employee details written successfully.");
        } catch (IOException e) {
            System.out.println("Error while writing: " + e.getMessage());
        }

        // Reading employee details from file
        try {
            BufferedReader reader = new BufferedReader(new FileReader(fileName));
            String line;

            System.out.println("\nEmployee Details:");

            while ((line = reader.readLine()) != null) {
                System.out.println(line);
            }

            reader.close();
        }
```

```

    } catch (IOException e) {
        System.out.println("Error while reading: " + e.getMessage());
    }
}
}

```

Output:

```

Employee details written successfully.

Employee Details:
Employee ID: 101
Name: Rahul
Department: IT
Salary: 50000

```

2. Create a Java program to write patient details (patient ID, name, age, and diagnosis) to a file and read the details from the file for display.

Code:

```
import java.io.*;
```

```

public class PatientFileHandling {
    public static void main(String[] args) {
        String fileName = "patient.txt";

        // Writing patient details to file
        try {
            BufferedWriter writer = new BufferedWriter(new FileWriter(fileName));

            writer.write("Patient ID: 201");
            writer.newLine();
            writer.write("Name: Amit");
            writer.newLine();
            writer.write("Age: 35");
            writer.newLine();
            writer.write("Diagnosis: Fever");
            writer.newLine();

            writer.close();
            System.out.println("Patient details written successfully.");
        }
    }
}

```

```
} catch (IOException e) {
    System.out.println("Error while writing: " + e.getMessage());
}

// Reading patient details from file
try {
    BufferedReader reader = new BufferedReader(new FileReader(fileName));
    String line;

    System.out.println("\nPatient Details:");

    while ((line = reader.readLine()) != null) {
        System.out.println(line);
    }

    reader.close();

} catch (IOException e) {
    System.out.println("Error while reading: " + e.getMessage());
}
}
```

Output:

```
Patient details written successfully.

Patient Details:
Patient ID: 201
Name: Amit
Age: 35
Diagnosis: Fever
```
