CSE- Academic Year 2026-27

Java Programming – Lab Batch 2025-29

Lab Assignment No:- 12

Lab Assignment No:- 12	
Name of Student	Akshat Thakur
PRN No.	25070122245
Batch	CS
Class	C2
Academic Year & Semester	25-29 3rd Semester
Date of Submission	31/8/26
Title of Assignment:	User-Defined Packages
Practice questions Output Screenshots Solve questions on given link and attach screen shot of leetcode with your login and o/p	Q1. Create a Java program by developing user-defined packages for a College Management System. Create separate packages for student and faculty details, and display their information using classes from these packages Code: File 1: Student . java package student; // Class to store student details public class Student

```
{
    public void displayStudent()
    {
        System.out.println("Student Details");
        System.out.println("Name: Akshat");
        System.out.println("Course: B.Tech CSE");
        System.out.println("Roll No: 101");
    }
}
```

File 2: Faculty.java

```
package faculty;

// Class to store faculty details
public class Faculty
{
    public void displayFaculty()
    {
        System.out.println("Faculty Details");
        System.out.println("Name: Dr. Sharma");
        System.out.println("Department: Computer Science");
        System.out.println("Designation: Professor");
    }
}
```

File 3: CollegeManagement.java

```
import student.Student;
import faculty.Faculty;

public class CollegeManagement
{
    public static void main(String[] args)
    {
        // Creating objects of classes from different packages
        Student s = new Student();
        Faculty f = new Faculty();

        s.displayStudent();
    }
}
```

```
        System.out.println();

        f.displayFaculty();
    }
}
```

Q2. Create a Java program by developing a user-defined package named library that contains a class to store and display book details such as book ID, title, author, and price. Import the package into the main program and display the book information.

Code:

File 1: Book . java

```
package library;

// Class to store book details
public class Book
{
    int bookId;
    String title;
    String author;
    double price;

    public Book(int bookId, String title, String author, double price)
    {
        this.bookId = bookId;
        this.title = title;
        this.author = author;
    }
}
```

	<pre> this.price = price; } public void displayBook() { System.out.println("Book Details"); System.out.println("Book ID: " + bookId); System.out.println("Title: " + title); System.out.println("Author: " + author); System.out.println("Price: Rs. " + price); } }</pre> File 2: LibraryDemo.java <pre>import library.Book; public class LibraryDemo { public static void main(String[] args) { // Creating object of Book class from library package Book b = new Book(101, "Java Programming", "James Gosling", 550); b.displayBook(); } }</pre>
Output Screenshots (if applicable)	Q1 Screenshot

Student Details

Name: Akshat

Course: B.Tech CSE

Roll No: 101

Faculty Details

Name: Dr. Sharma

Department: Computer Science

Designation: Professor

Q2 Screenshot

Book Details

Book ID: 101

Title: Java Programming

Author: James Gosling

Price: Rs. 550.0

Conclusion

The program successfully demonstrates the creation and use of user-defined packages in Java. Separate packages were created to organize related classes and information. The classes from these packages were imported and used in the main program. Packages help in better code organization, reusability, and avoiding naming conflicts. Thus, user-defined packages make Java programs more modular and easier to manage.
